

New technical parameters to receive Cubavision International through HISPASAT

The technical parameters for receiving Cubavision International publicly through HISPASAT have been modified, and as from today the reception of the mentioned channel is carried out using the following parameters:

- *Transponder 60 from Hispasat 1C:*
- *Reception frequency : 12092*
- *Polarization: Vertical*
- *Symbol Rate: 27500*
- *FEC = 3/4*

HISPASAT has maintained the Cubavision signal, which has been broadcast on transponder 57 from Hispasat 1C from 10th October until today. The aim of this being not to prejudice the users but to give them a reasonable time to get to know the new broadcasting frequency.

Cubavision International forms part of the more than 50 channels that HISPASAT publicly offers in Europe. In order to receive this it is enough to install a satellite dish of small diameter pointed at the HISPASAT satellites which are located at 30° West and a basic digital receiver (decoder). Furthermore, HISPASAT distributes more than forty radio channels in Europe.

In Spain and Portugal, the HISPASAT television offer reaches more than three million homes, carrying out the aim of offering the users a quality programme from its satellite system, where more emphasis is given to international channels such as Euronews or Cubavision International, as well as current news channels like Localia and sports channels like Real Madrid TV. Furthermore, HISPASAT is a broadcasting reference from the television direct to the home in the Iberian Peninsula by means of the digital television platforms Digital + in Spain and TV Cabo in Portugal.
